**Choose Life**

Using brain scans, an international team of scientists has taken a look inside the brains of patients diagnosed as **being in a “vegetative state.”** These patients, the images clearly showed, were living silently—their minds apparently active, the scans showing brain activity like that in any healthy conscious person (*New York Times*, 2/4/10) This counteracts the arguments **that such patients are “in a vegetative state,”** and can be starved to death s Terry Schiavo was in 2005.
